# YOUR ADVANTAGES

---

## SUSTAINABLE SOLUTION

The system contributes to the reduction of your environmental footprint. Your company will protect the environment for chemicals and contamination, reduce the irresponsible consumption of freshwater, protect the employees for harmful odors and as the icing on the cake, get a greener business and reputation.

## COST-SAVINGS

Save costs of: freshwater, wastewater discharge, sludge removal and disposal, chemicals, purchase and maintenance of an oil skimmer. You can lease the system and make profit from day one.

## EFFICIENT

The system recycles 100% of drained wastewater. The quality of the recycled water is excellent - it is as clear as drinking water. The material composition ensures a long life time and flexibility of the system.

## INTELLIGENT & RELIABLE

You can control the system online from any PC. The control program collects data (e.g. the quantity of recycled water, freshwater consumption), which you can use to document the reduction of your company's environmental footprint. Thanks to our online service and error videos, we can help you immediately and ensure a problem-free operation of your system.

## MINIMAL MAINTENANCE & MOBILE

The system is fully automatized and your attention is almost not required. It will regulate the important parameters. The water should never be replaced. The unit can be moved if needed.

# OUR CUSTOMERS SPEAK FOR US

"We wash many tanker trucks every day. Therefore, it definitely makes sense that we get the dirty water treated and use it again and again. With the recycling system, we reduce our freshwater consumption and get a greener profile. At the same time, we save quite a lot on our water bill. In the past three years, we have saved about **17.800 m3 of freshwater** and **88.320 EURO**.

And furthermore, it is really smart that you can always follow the operation of the system online in the control program."

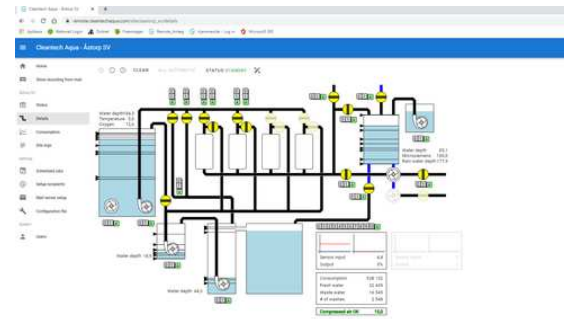

- Preben Hansen, Owner and Director in Demstrup Autotransport

"I definitely recommend Cleantech Aqua to to everyone who wants to reduce the use of freshwater. In the past, we had used 9.157 m3 of freshwater every year to wash our buses. After we got the system, we have been able to reduce the freshwater consumption down to 458 m3 per year. Until now, we have saved **403.361 EURO** and **87.993 m3 of freshwater**. The system has been in a constant operation for 9,5 years and there were just a few smaller reparations. There is no daily maintenance, I only clean a strainer every friday."

- Mogens Carlsen, Bus Mechanic in Keolis

## WHAT DO YOU GET WITH CLEANTECH AQUA A/S?

- A solution that provides the same excellent water quality every time.
- A greener profile that connects to 7 of the Sustainable Development Goals.
- A user-friendly control program, which ensures high operational reliability.
- Documentation for the reduction of your company's environmental footprint (saved freshwater, recycled water, saved discharge, etc.).
- Minimal operational costs and a control over them.
- Attractive cost-savings.
- An opportunity to demonstrate that you contribute to a more sustainable industry.
- An opportunity to communicate a green message/story (e.g. in marketing, on social media, as a sticker on your trucks).
- 1 year guarantee and a service contract, that ensure a problem-free operation of your system.
